

# The Difference You Can See

**Unparalleled vision, timing and angle of release; only with the Hack Attack, the new standard in professional baseball pitching machines.**

**Better than two-wheel machines for vision...**

Hack Attack has a unique three wheel design. The hitter knows when to stride, never losing sight of the ball.

**Better than arm machines for timing...**

It's almost human; life-like ball release follows the path of the pitcher's arm, giving the hitter a realistic sense of timing and location. With an arm machine, acceleration and release are hidden by massive guards that protect the dangerous throwing arm.

**Better than arm machines for pitch variety...**

Hack Attack delivers all left or right-handed breaking pitches with extreme accuracy and speed.

**Better than two-wheel machines in ease of operation...**

The throwing head stays in place requiring only the changing of the speed of the wheels for any breaking pitch.

**Better than all other pitching machines...**

No cumbersome adjustments, moving to fungo work takes only seconds; pivoting instantly for deep fly balls, slicing line drives, grounders and catchers pop-ups with a reverse spin.

Sets-up instantly, moves and stores easily

Baseball Hack Attack

**Hack Attack \$2,099**

**Accessories**

**Solo Ball Feeder \$199**  
(15 baseball capacity)

**Team Ball Feeder \$999**  
(200 baseball capacity)

# The Difference You Can See

## Hitting station forces hitters to track and focus on the center of the ball. Resulting in solid contact of live pitching.

Track Attack uses "Eye Balls™", which are 20% smaller than regulation baseballs, the critical size that forces centering while maintaining proper hitting mechanics. They are soft, limited flight pitching machine balls with a true trajectory up to 40' — not Wiffle™ balls. Tracking keeps the head down at contact, causing the front shoulder and hips to stay in. Simulate speeds up to 90mph. Use on any surface, indoors or out, gym, field, or at home.

### Eye Balls (20% smaller than regulation)

- Track Attack pitches softer, limited flight pitching machine balls that require very little containment
- Provides a feel of resistance at contact off both wood and aluminum bats
- True trajectory up to 40 ft. - No Wiffle™ balls!
- Incorporates vision into soft toss drills.

### Vision Training Tool

- Extended feed chute allows hitter to see ball from feed, through acceleration and release, better than arm machine action!
- Hitter knows when to stride, providing a smooth, realistic sense of timing
- Focuses on technique, forces the hitter to keep eyes on ball, head down, front shoulder and hips in
- Sets-up instantly, moves and stores easily
